1. Create a CarsController with all crud on a static list
2. Enable logging and try to log some requests.
3. Add a counter that counts the requests and add an endpoint, through which we can get the value of this counter. (bonus).
4. Add Validation on Car Object to be (ProductionDate to be in the past only)
5. Add a custom validation if the card Model is "Tesla", then the ProductionDate should be newer than 2008.
6. Template ID in routes should be minimum 1
7. GetById action should have a custom ActionName and Post method should return the url for the newly added car in the header.
8. Add a new property to the Car Model Called Type. Old endpoint should explicitly assign this property with "Gas". New endpoint should validate that this property can only accept "Electric, Gas, Diesel and Hybrid".
9. Install Postman and use it.
